## PRESS RELEASE SIMA 2009

### Power Harrows HR 104 – 1004 and 1004 folding series

KUHN is developing its mid- and high-end ranges of power harrows. The following developments are particularly notable:

- Side deflector arms reinforced for improved resistance to impacts caused by contact with rocks.
- The deflector walls have been revised to produce a perfectly level seedbed.
- Greater comfort for adjusting the deflectors.
- Hitch attachments raised on some mounted models.
- New side casings for 4 to 5m folding machines.
- The possibility of fitting part of the range with the new STEELLINER rollers.

All these models can be delivered with standard blades or coated for lengths 31 to 36 cm. A blade with a sharp "Optimix" profile can also be delivered for simplified preparation.
