MEGANT Seed Drill with REAR ROLLER

KUHN now offers the MEGANT tine seed drill with a rear roller.

The particular design of this roller lies in the juxtaposition of the individual wheels, which gives users:

- Better seed-soil contact because of the preferential line tamping
- The possibility of using the seed drill on heavily undulating land: The seed drill is independent of the tractor because it rests on its front wheels and the rear roller.
- Improved soil flow through the individual wheels, thereby reducing power consumption and hence fuel consumption.
